HERON RESOURCES LIMITED

ASX MEDIA RELEASE

1 December 2004

Kalgoorlie Nickel Project

Purchase of Bulong Taurus Prospect from SuperSorb

Heron (ASX:HRR) is pleased to announce it has entered into a letter agreement with SuperSorb Environmental NL (SuperSorb) to purchase the Bulong Taurus Prospect adjacent to Heron's Bulong Nickel Prospect. Bulong Taurus covers 3.66km² over 3 tenements.

Heron Managing Director Ian Buchhorn said Bulong Taurus is a further consolidation of Heron's Kalgoorlie Nickel Project resource base, and with the previously announced Danae Bulong East acquisition, ties up all documented nickel laterite mineralisation at Bulong.

"The Bulong Taurus acquisition delivers additional potentially high grade saprolite mineralisation for the proposed Goongarrie processing plant," Mr Buchhorn said.

"This latest acquisition further confirms that the Kalgoorlie Nickel Project is continuing at full pace. The Company is currently drilling out proposed pit areas at Goongarrie, Siberia and Highway, and bulk drill samples from these areas are being processed at the Oretest Perth metallurgical laboratory."

The consideration is \$20,000 cash and 200,000 Heron vendor shares, following which Heron will have 100% ownership of all mineral rights at Bulong Taurus.

Nickel laterite mineralisation is present at Bulong Taurus, with previous drill intercepts including 16m at 1.22% Ni, 23m at 1.05% Ni, 28m at 1.03% Ni, 14m at 1.37% Ni, 19m at 1.04% Ni, 27m at 1.20% Ni and 17m at 1.41% Ni.

The currently defined mineralised area at Bulong Taurus occurs over an area of 1,000 x 200m which has been drilled for resource definition. A significant area of prospective ultramafic rock has had only minimal exploration completed. This area is a key target area for future Heron drill exploration, aimed at increasing saprolite resources.

Yours faithfully

Managing Director

"The information in this report that relates to Mineral Resources or mineralisation is based on information compiled by Norman Mathew Longworth, who is a Member of the Australasian Institute of Mining and Metallurgy. Norman Mathew Longworth has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 1999 Edition of the "Australasian Code for Reporting of Mineral Resources and Ore Reserves".
