

Bush Diary

David von Perger at Bulong

We have recently commenced reverse circulation drilling in the Big Four area, some 70 kilometres north of Kalgoorlie. This is the first of a number of programs that Heron is conducting in the coming months to extend the zones of known nickel laterite mineralisation. Other programs are planned in the Goongarrie, Ghost Rocks and Bulong areas. This drilling is in addition to the diamond core drilling currently being undertaken by Inco.

With the new mining legislation being proclaimed in February, the last few weeks have been a busy time of pegging new mining leases. By pegging mining leases we have the option to revert them back to exploration licences or prospecting licences in the next year. John Briant, our senior field supervisor, is pictured here pegging the datum post of two mining leases in the Perrinvale area.

Field reconnaissance work continues in a number of areas, including surface sampling for gold and nickel mineralisation.
